

Programming Exercise 6B

The Lab 6B assignment will be a set of practice functions that you will write on an online Python web site called codingbat.com.

This will not be for a grade; however, there will be 2 essay questions with similar requirements that you will write code segments for on the upcoming test. To be upfront, I will say that the answers to codingbat questions are available on the Internet, but you really need to try to solve the problems yourself to understand how to do it. If you get stuck, you can look for the help, but make absolutely sure you understand what the code is doing.

Here is a [video link](#) where I solve a couple of codingbat problems to help you get started.

The ones that you need to complete are:

- Logic-1 > sorta_sum
- Logic-1 > in1to10
- List-1 > common_end
- List-1 > reverse3
- List-2 > big_diff
- List-2 > has2
